No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Fublication No. US20050202537A1

GENERAL INFORMATION:

APPLICANT: Liang, Pency GenHunter Corporation

TITLE OF INVENTION: Methods and composition for producing secreted trimeric

TITLE OF INVENTION: receptor analogs and biologically active fusion proteins

TITLE OF INVENTION: US-PL

CURRENT APPLICATION NUMBER: US/10/677,877A

CURRENT FILING DATE: 2003-10-02

NUMBER OF SEQ ID NOS: 16

SEQ ID NO 3

LENGTH: 771
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Sequence 1, Application US/10677877A

Publication No. US2005020537A1

Publication No. US2005020537A1

APPLICANT: Liang, Peng; GenHunter Corporation

TITLE OF INVENTION: Methods and composition for producing secreted trimeric

TITLE OF INVENTION: Teceptor analogs and biologically active fusion proteins

TITLE REPERENCE: 03-05-PL

CURRENT APPLICATION NUMBER: US/10/677,877A

WUMBER OF SEQ ID NOS: 16

SEQ ID NO 1

LENGTH: 963

                                                                                                                                                                                                ઠે
                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Subjunction 105/10677877A

Subjunction No. US20050202537A1

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: Methods and composition for producing secreted trimeric

TITLE OF INVENTION: receptor analogs and biologically active fusion proteins

FILE REFERENCE: 03-052-PL

CURRENT APPLICATION NUMBER: US/10/677,877A

CURRENT FILING DATE: 2003-10-02

NUMBER OF SEQ ID NOS: 16

SEQ ID NO 9
                                                                                                                                                                                                                                                                                                                                                                                                                                    919

Claim 14; SEQ ID NO 4; 47pp; English

The invention relates to a novel method for generating a secreted trimeric fusion protein. The method comprises creating a DNA construct comprising a transcriptional promoter linked to a template encoding a signal peptide sequence followed, via an inferame fusion, to the polypeptide to be trimerized, which in turn is joined in-frame to a polypeptide capable of self-trimerization which is heterologous to the first polypeptide to be trimerized, and introducing the construct into a eukaryotic cell. Receptor dade-oys, e.g. soluble receptors consisting of only the extracellular ligand-binding domain, may be used to intercept a ligand and thus overcome the overactivation of a receptor during disease

```
treatment. Trimeric receptor decoys theoretically should have a much higher affinity to their ilgand than their dimeric counterparts. Such rationally designed soluble trimeric receptor analogs could significantly increase clinical benefits, as well as lower the amount or frequency of drug injections for each patient. The method of the invention may be useful for generating a secreted trimeric fusion protein to be used for more efficient neutralization of the biological activities of their maturally occurring trimeric ligands. The current sequence is that of the human collagen alpha(I) C-propeptide T2 construct protein of the invention. The construct includes a mutated BMP-1 recognition site but does not contain the glycine-repeat triple helical region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PNGGCNLDAIKVFCNMETGETCVYPTQPSVAQXNWYISKNPKDKRHVWFGESMTDGFQFE 120
